

EffortLess

One press: deposit all eligible items to the Vault, then log out. • by Mhortai

What it does

EffortLess is a single-action convenience addon for the Uncapped realm. When you activate it, it:

- Sends the server's **deposit-all** command, banking every deposit-eligible bag item into the Uncapped Vault in one server-side call.
- Waits briefly for those deposits to land.
- Logs you out.

No banker and no open vault window are required - the Uncapped Vault is a custom server system addressed directly, so this works anywhere in the world.

How to activate

Any one of these: type **/el** (or **/effortless**), or click the **minimap button** (a bag icon on the minimap rim). By default a confirmation prompt appears first - answer **Yes** to deposit and log out, **No** to cancel.

Commands

Command	Effect
<code>/el</code> or <code>/effortless</code>	Deposit all & log out (shows the confirm prompt if enabled).
<code>/el now</code>	Deposit all & log out immediately, skipping the prompt.
<code>/el confirm on off</code>	Turn the confirmation prompt on or off.
<code>/el button</code>	Show or hide the minimap button.
<code>/el options</code>	Open the options panel.
<code>/el arm on off</code>	Arm / disarm auto-run on login.
<code>/el cancel</code>	Cancel a pending armed countdown (this login).

The minimap button

Left-click activates EffortLess. **Right-click** opens the options panel. **Drag** it anywhere; the exact position is saved between sessions. Hide it with **/el button** for slash-only use.

Armed auto-run on login

Turn on **Auto-run on login (armed)** (options panel or **/el arm on**) and EffortLess **deposits all & logs out about 9 seconds after every login** - the addon half of a hands-off loop (pair it with an external key-sender that presses Enter at character select). Armed is **OFF by default**.

During those 9 seconds a countdown shows with a **Cancel this login** button (**/el cancel** too).

Cancelling skips only that login; the addon stays armed. To stop, untick the box or **/el arm off**. The delay is deliberate - it is your cancel window and it lets the vault pipe come up after login (a deposit sent too early is dropped).

Escape hatch: while armed, every login logs you out after the countdown. If you get stuck, break the loop from the desktop by deleting the EffortLess folder or its SavedVariables.

Options panel

Open it from **Interface -> AddOns -> EffortLess**, by **right-clicking** the minimap button, or with **/el options**. Two toggles: **Confirm before depositing & logging out** (the Yes/No prompt) and **Show minimap button** (the draggable bag icon).

What "all items" means

The **server** decides what is eligible to deposit. Quest items, soulbound items, and anything the realm keeps by rule (reagents, keys, world-use items, and so on) stay in your bags on purpose. EffortLess does not filter anything itself - it asks the server to bank everything eligible, and the server prints its own message for anything it refuses. Items left behind are expected, not a failure.

About the logout delay

The 20-second logout countdown is enforced by the server, not the addon. Logout is near-instant only when you are resting (city/inn) or if the realm has instant logout enabled. EffortLess deposits first regardless, so your items are banked even while the countdown runs.

Notes & limits

- One action at a time. Triggering again while a deposit/logout is in progress does nothing.
- There is **no auto-relogin loop**. Once you reach character selection, no addon is running, so nothing can press a key or log back in for you - that is not possible from inside WoW.
- Safe by nature: deposits are reversible (withdraw from the Vault) and logout is reversible (log back in). The confirmation prompt exists only to prevent an accidental click.

Changelog

v1.2.1

- Armed login wait raised ~6s -> ~9s (more vault-pipe warmup before the deposit push; longer Cancel window). Manual trigger unchanged.

v1.2.0

- Added ARMED auto-run on login (default OFF): deposits all & logs out ~6s after every login - the addon half of a hands-off loop.
- 6s on-screen countdown with a Cancel button; /el cancel skips one login (stays armed).
- /el arm on|off and an Auto-run-on-login checkbox with an on-panel warning.
- 6s delay is both the cancel window and the vault-pipe warmup (a too-early deposit send is dropped).
- Escape hatch: delete the folder or SavedVariables to break the loop. /reload suffices.

v1.1.0

- Added an Interface options panel (Interface -> AddOns -> EffortLess): toggles for the confirm prompt and the minimap button.
- Minimap button right-click opens the panel; /el options also opens it.
- No change to the core deposit/logout action; /reload suffices.

v1.0.0

- Initial release.
- One press: deposit all eligible bag items to the Uncapped Vault, then log out.
- Trigger three ways: /effortless, /el, or a draggable minimap button.
- Confirmation dialog before acting (default ON); /el now acts immediately; /el confirm off turns it off.
- Deposits via the server's VLTDEPALL verb over the REAGENTBANK transport; server decides eligibility (quest/bound/kept items stay). Works anywhere; no banker needed.
- After the deposit send, waits until bags stop changing before logging out (1.2s settle, 6s cap).
- Note: the 20s logout countdown is server-side (near-instant only when resting or if the realm enables instant logout).
